

# NextCloud 27.0.0 In php.ini Increase opcache.interned\_strings\_buffer to a Value Higher than 8

In the Administrative Overview section of NextCloud, the following warning appeared:

The PHP OPcache module is not properly configured. See the documentation for more information. The OPcache interned strings buffer is nearly full. To assure that repeating strings can be effectively cached, it is recommended to apply opcache.interned\_strings\_buffer to your PHP configuration with a value higher than 8.

Edit PHP.ini with Vim to adjust opcache.interned\_strings\_buffer and opcache.memory\_consumption. E.g. Just increase their values for now, as follows:

Find and edit the php.ini file in the following directory:

```
cd /etc/php/8.1/apache2  
  
ls  
  
[to list php.ini file]
```

Use Vim to edit the php.ini file.

```
sudo vim php.ini
```

Change the value of the buffer from 8 to 16 Change the value of memory consumption from 128 to 256 By editing the following settings within the php.ini file

```
opcache.interned_strings_buffer=16  
opcache.memory_consumption=256
```

Save and exit vim.

Restart the Apache2 service

```
sudo systemctl restart apache2
```

See whether the warning message, "the OPcache interned strings buffer is nearly full," has disappeared from the nextcloud administration overview section. It should be gone, and all is well.
