Adding Roles On Windows Server

Let's say we want to add the role of DNS Server

1. Open Server Manager or Initial Configuration Tasks
2. Click "Add Roles" under Roles Summary or Customize this Server
3. Click Next button from the Before you Begin page of the Add Roles Wizard
4. For the First Role, let's select the Checkbox for DNS Server
5. Click Next button (Note we are not integrating with Active Directory Domain Services because that role or feature is not installed)
6. under confirmation, select Install button
7. Wait for the progress indicator to complete for the installation of the role of DNS Server
8. Installation Succeeded
9. click the Close Button
10. Even if you are not asked to do so, you should restart the Windows Server.

Adding Web Server (IIS) Role

1. You probably need to install some prerequisite features for this Role
